THIS YEAR'S GEOCHALLENGE: TACKLING PLASTIC!

Students will investigate the urgent issue of plastic pollution in our waterways.

Challenge your students to develop creative real-world solutions to pressing real-world problems.

The National Geographic GeoChallenge is an annual themed and project-based challenge that presents students in grades 5-8 with a real-world issue facing our planet. Students engage in solving this global problem, just like National Geographic Explorers.

Along the way, students research, collaborate, and communicate, gaining skills that will help them succeed as global citizens. Teams with the best projects can advance to the regional and national levels.

STUDENTS WILL...

TEAM UP ➤ IDENTIFY A PROBLEM ➤ DESIGN A SOLUTION ➤ MAKE AN IMPACT
